choice is made through a simple tool pickup by the operator. Stationary and moving systems - equipped with synchronized trolley- for a better compliance with the production requirements and times.

Flexible and modular products to optimize the space and assure comfortable and safe working areas. Overhead structures to hold the power and fluid cabinets, moving trolleys with automatic positioning and ergonomic tools are just a few of the technical features characterizing the NKE systems' high quality.

We have matured a very long experience in designing and manufacturing glazing systems.

From the simple stand-alone unit for the bead application onto the glass up to the integrated systems, managing the cleaner and primer application, the gluing and the automatic decking onto the car assisted by the vision system.

Basically, the installations can be divided into two sub-systems: manipulation and glue vein.

The manipulation, according to the installations' complexity and to the 0.000 giefsations can b' coossted be simply

The glue vein, to the side of our experience, we optimize the space and

With the main goal of providing a high level of safety and
